PROJECT BRIEF

Safai Setu

A unified digital platform for municipal sanitation operations, property services, workforce management and citizen engagement in Tinsukia.

Base Location	Primary Users	Core Objective
Tinsukia	Admin, HR, Supervisor, Labour, Property User	Digitise and connect sanitation services end to end

1. Project Purpose

Safai Setu is proposed as a central digital system to manage sanitation services across Tinsukia. The platform connects properties, residents, field supervisors, sanitation labourers, HR teams, and administrators through a single application. It replaces fragmented registers, manual follow-ups, and disconnected complaint channels with structured workflows, real-time visibility, and accountable service delivery.

Each property receives a unique identification number linked to its primary mobile number. This unique ID becomes the common reference for login, monthly payments, complaints, service requests and service history. The system also supports GPS-based vehicle tracking so residents and officials can monitor daily waste collection activity.

2. Key Project Components

Component	What it enables
User onboarding	Role-based onboarding for Admin, HR, Supervisors, and permanent sanitation laborers.
Property onboarding	Creation of a verified property record and a unique property ID linked with the owner or occupant mobile number.
Waste collection tracking	GPS visibility for collection of vehicles, routes, and daily service movement.
Citizen services	Monthly payment, complaint registration, service requests, and vehicle tracking.
Workforce operations	Attendance, leave, payroll, advance requests, employee allocation, and internal issue reporting.
Service accountability	Assignment, escalation, action tracking, and closure of complaints and requests.

3. Role-Based Responsibilities and Workflows

The platform provides separate dashboards and permissions for each stakeholder. This ensures that every user sees only the functions relevant to their responsibilities while management retains complete oversight.

Property User / Resident	• Track the assigned waste collection vehicle and understand expected service movement. • Pay the applicable monthly sanitation fee using the unique property ID. • Raise complaints related to missed collection, service quality or other sanitation issues. • Submit service requests and track their status through closure.
Supervisor	• Track the assigned waste collection vehicle and understand expected service movement. ◦ View assigned locations, employees, and operational responsibilities. • Mark employee attendance manually through the application when required. • Submit leave requests for self and assigned laborers for approval by HR or Admin. • Receive and resolve assigned citizen complaints within the designated area. • Raise internal complaints regarding labour, location, vehicle or operational issues. • Submit employee advance payment requests to HR. ◦ Supervisor can collect the pending payment using the application
HR	• Onboard permanent employees and maintain employee records. • Track the waste collection vehicle and understand expected service movement. • Onboard and manage operational locations and employee allocations. • Manage attendance, leave approval, payroll and advance payment requests. • Coordinate employee-related service issues and support administrative reporting. ◦ Payroll Management - Working Days Management, Salary assignment. ◦ Manage vehicle-based complaints and re allocation of vehicles ◦ Supervisor can collect the pending payment using the application, and that needs to be acknowledged by HR or admin after collection has been received.
Admin	• Control overall user, employee, supervisor, property and location onboarding. • Track the waste collection vehicle and understand expected service movement. • Monitor attendance, payroll, leave, advances,

complaints and service requests.

- Assign or reassign issues to supervisors and monitor closure timelines.
- View operational dashboards, GPS tracking and management reports.
    - Payroll Management - Working Days Management, Salary assignment.
    - Manage vehicle-based complaints and re allocation of vehicles
    - Supervisor can collect the pending payment using the application, and that needs to be acknowledged by HR or admin after collection has been received.

4. End-to-End Operating Flow

	Stage	Description
1	**Set up organization**	Admin creates HR, supervisors, labour profiles, locations and access permissions.
2	**Register properties**	Property details are captured, and a unique property ID is generated ar linked to a primary mobile number.
3	**Assign workforce and routes**	Supervisors and laborers are mapped to locations, vehicles and collec responsibilities.
4	**Run daily collection**	Vehicle GPS movement, attendance and field operations are recorded management visibility.
5	**Serve residents**	Residents track vehicles, make monthly payments, raise complaints, a submit service requests.
6	**Resolve and monitor**	Supervisors act on assigned issues while HR and Admin monitor escal payroll, leave, and service performance.

5. Expected Benefits for Stakeholders

akeholder	Value delivered
tizens	A simple login using property ID and mobile number, better service visibility, easier payment and transparent complaint tracking.
eld teams	Clear allocation of locations and duties, faster escalation of operational issues, and digital employment records.
R and Administration	Centralised attendance, leave, payroll, advances, employee onboarding and service-management workflows.
unicipal leadership	Reliable data on property coverage, collection movement, workforce deployment, complaint resolution and revenue collection.
verall programme	Improved accountability reduced manual dependency, faster response times, and measurable sanitation service delivery.

6. Stakeholder Summary

Safai Setu creates one connected operating system for sanitation services in Tinsukia. By linking every property, resident request, employee, supervisor, vehicle and payment to a controlled digital workflow, the project enables transparent service delivery and stronger municipal oversight. The platform can be introduced in phases, beginning with user and property onboarding, followed by workforce operations, GPS tracking, citizen services, payments and management analytics.
